

# Temple Ewell Church of England Primary School

## Progression towards a standard method of calculation

Introduction: The 2014 National Curriculum provides a structured and systematic approach to the teaching of calculation. The aim is for mental calculations and written procedures to be performed efficiently, fluently, accurately with understanding. Procedures and understanding are to be developed in tandem. End of key stage expectations are explicit in the programme of study.

At Temple Ewell CE Primary School, we have a consistent approach to the teaching of written calculation methods in order to ensure continuity and progression across the school.

### **Age related expectations:**

Children are to be taught to age appropriate expectations as set out in the National Curriculum 2014; **however it is vital that pupils are taught according to the stage that they are currently working at.**

### **Providing a context for calculation:**

It is important that any type of calculation is given a real life context or problem solving approach to help build children's understanding of the purpose of calculation, and to help them recognise when to use certain operations and methods. It is also important for children to be confident to use mental and written strategies to explain their thinking. This must be a priority within calculation lessons. Written methods need to be viewed as tools to enable children to solve problems and record their thinking in an organised way.

### **Aims:**

Children should be able to use an efficient method, mental or written appropriate to the given task, with understanding. By the end of year 6, children will have been taught, and be secure with, a compact standard method for each operation.

### **To develop efficient written calculation strategies children need:**

- Secure mental methods which are developed from early years
- A solid understanding of the number system
- Practical hands on experience including a range of manipulatives
- Visual models and images including number lines and arrays
- Experience of expanded methods to develop understanding and avoid rote learning
- Secure understanding of each stage before moving onto the next.

**Before carrying out a calculation, children will be encouraged to consider:**

- Can I do it in my head? (using rounding, adjustment)
- The size of an approximate answer (estimation)
- Could I use jottings to keep track of the calculation?
- Do I need to use an expanded or compact written method?

**Pre requisite skills for written calculations**

**Addition and subtraction:**

- Do they know all the addition and subtraction facts for all numbers to 20?
- Do they understand place value and can they partition and then re-partition numbers?
- Can they add three single digit numbers mentally?
- Can they add and subtract any pair of two digit numbers mentally?
- Can they explain their mental strategies orally and record them using informal jottings?

**Multiplication and Division:**

- Do they know the 2, 5 and 10 times tables and corresponding division facts?
- Do they know the result of multiplying by 1 and 0?
- Do they understand 0 as a place holder?
- Can they multiply two and three digit numbers by 10 and 100?
- Can they double and halve two digit numbers mentally?
- Can they use multiplication and division facts they know to derive mentally other multiplication and division facts that they do not know?
- Can they explain their mental strategies orally and record them using informal jottings?

These lists are not exhaustive but are a guide for the teacher as they structure the move from informal to formal methods of calculation. It is vitally important that children's mental methods of calculation continued to be practised and secured alongside their learning and use of an efficient written method for each operation.

**A pathway to teaching calculation methods:**

Expanded methods should be viewed as steps towards a standard method and not as methods in themselves.

Before beginning to record in a more refined written format children must have had significant practical work reinforced with appropriate manipulative, models and images.

Teachers will guide pupils to refine their written methods of recording by modelling and asking questions such as "What is the same? What's different?"

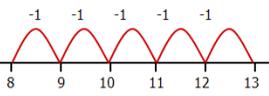

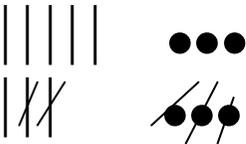

Learning will be planned to ensure pupils are encouraged to use and apply what they have learnt to problem solving tasks.

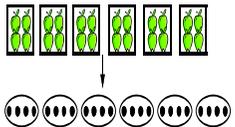

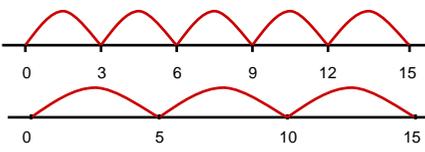

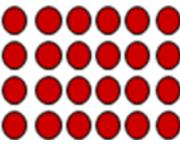

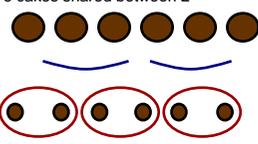

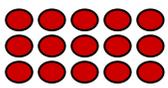

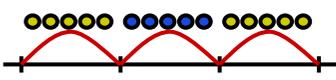

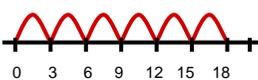

As children move along the pathway it is **vital that they practice, reinforce, consolidate, use and apply it to mathematical learning** and **NOT** simply move onto the next step.

***Point to note:***

*Teachers should refer to the programme of study for key vocabulary for each year group.*

The following pages outline how the progression of calculations to be taught at Temple Ewell. They are organised according to stage, children moving through the stages according to their understanding and age expectation according to the 2014 National Curriculum (teachers are providing with additional guidance to support this). Children are expected to be taught to lay their calculations out as outlined below.

	Stage 1	Stage 2	Stage 3	Stage 4	Stage 5	Stage 6	Stage 7
Addition	<p><b>Drawing objects</b></p> <p><b>Mark making</b></p> $8 + 4 = 12$ IIIII IIII III	<p>Children will be encouraged to add the ones first to prepare them for later stages of addition and to ensure a consistent approach:</p> $24 + 5 = 29$ □ IIII    IIII □	<p>Children are encouraged to add the smaller number to the bigger, adding the units first. This method is used to underpin later mental work.</p> $36 + 53 =$	<p>Children add the ones first then the tens.</p> $75 + 69 =$ $70 + 5$ $60 + 9$ $130 + 14$ $130 + 10 + 4 = 144$ <p>Moving to...</p> $126 + 133 =$ $100 + 20 + 6$ $100 + 30 + 3$ $200 + 50 + 9 = 259$	<p>Children move to contracted method, adding from the ones first.</p> $124$ $+ 34$ $158$	<p>Children move to exchanging the ones, striking it out as it is added back in.</p> $129$ $+ 34$ $153$ <del>1</del> <p>Children move to exchanging tens for hundreds.</p> $189$ $+ 234$ $313$ <del>1</del>	<p>Move to adding decimals</p> $18.9$ $+ 23.4$ $31.3$ <del>1</del>
Subtraction	<p><b>Drawing objects</b></p> <p><b>Mark making</b></p>  [Might be recorded as: $9 - 5 = 4$ ] 	<p>Use manipulatives to support subtraction work, they record their method using jottings to show manipulative (we refer to these as 'chips and peas').</p> $86 - 23 = 63$ 	<p>Continue to use chips and peas method (as left).</p> <p>Subtract on a number line by counting backwards using efficient jumps.</p> $13 - 5 = 8$	<p>Count on to find the difference.</p> $84 - 48 =$	<p>Exchanging values, using manipulatives to support as required.</p> $333 - 272 =$ <del>200</del> $300 + 130 + 3$ $200 + 70 + 2$ $0 + 60 + 1$ $61$ <p>Move to finding the difference between larger numbers.</p> $436 - 389 = 47$	<p>Contracted method, starting from the ones.</p> $876 - 341 =$ $876$ $- 341$ $531$ <p>Moving to exchanging the numbers, using manipulatives as needed.</p> $2 \overline{) 814}$ $- 135$ $115$	<p>Use decomposition with decimals, striking out the numbers.</p> $72.5 - 45.7 = 26.8$ <del>7</del> $11.2.5$ $- 45.7$ $26.8$
			<p>Move to counting back larger numbers, counting back the ones first to support later operations.</p> $86 - 23 =$	<p>Children subtract the ones first, they are expected to line the values under each other...</p> $333 - 212 = 121$ $300 + 30 + 3$ $200 + 10 + 2$ $100 + 20 + 1$	<p>Children move to exchanging the numbers, using manipulatives as needed.</p> $389$ $+ 11$ $+ 36$ $400$ $436$	<p>Contracted method, starting from the ones.</p> $876 - 341 =$ $876$ $- 341$ $531$	<p>Use decomposition with decimals, striking out the numbers.</p> $72.5 - 45.7 = 26.8$ <del>7</del> $11.2.5$ $- 45.7$ $26.8$

Fractions

COUNTING IN FRACTIONAL STEPS					
Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
	<i>count on or back in in <math>\frac{1}{2}</math> or <math>\frac{1}{4}</math> to 10,</i>	<i>Count on and back in <math>\frac{1}{2}</math>, <math>\frac{1}{4}</math> and <math>\frac{1}{3}</math></i>  <i>count up and down in tenths</i>	<i>Count on or back in unit fractions</i>  <i>count up and down in hundredths</i>	<i>Count on or back in mixed number steps such as <math>11\frac{1}{4}</math></i>	<i>Count on or back in tenths, hundredths and thousandths</i>
RECOGNISING FRACTIONS					
<p>recognise, find and name a half as one of two equal parts of an object, shape or quantity</p> <p>recognise, find and name a quarter as one of four equal parts of an object, shape or quantity</p>	<p>recognise, find, name and write fractions <math>\frac{1}{3}</math>, <math>\frac{1}{4}</math>, <math>\frac{2}{4}</math> and <math>\frac{3}{4}</math> of a length, shape, set of objects or quantity</p>	<p>recognise, find and write fractions of a discrete set of objects: unit fractions and non-unit fractions with small denominators</p> <p>recognise that tenths arise from dividing an object into 10 equal parts and in dividing one – digit numbers or quantities by 10.</p> <p>recognise and use fractions as numbers: unit fractions and non-unit fractions with small denominators</p>	<p><i>Recognize find and write fractions of a set of objects, shapes or quantities including those with a range of numerators and denominators</i></p> <p>recognise that hundredths arise when dividing an object by one hundred and dividing tenths by ten</p>	<p><i>Recognise mixed numbers and improper fractions and convert from one to the other</i></p> <p>recognise and use thousandths and relate them to tenths, hundredths and decimal equivalents</p>	<p><i>Continue to recognise and use thousandths and relate them to tenths, hundredths and decimal equivalents</i></p>
COMPARING FRACTIONS					
		<p>compare and order unit fractions, and fractions with the same denominators , <i>including on a number line</i></p>	<p>Continue to compare and order unit fractions, and fractions with the same denominators , <i>including on a number line</i></p>	<p>compare and order fractions whose denominators are all multiples of the same number <i>including on a number line .</i></p>	<p>compare and order fractions, including fractions <math>&gt;1</math> e.g. <math>2, 2\frac{3}{4}</math> , <math>1\frac{3}{4}</math> , <math>1\frac{1}{2}</math> and position them on a numbers line</p>

**EQUIVALENCE (INCLUDING FRACTIONS, DECIMALS AND PERCENTAGES)**

<i>Find fractions of small numbers or quantities practically and describe orally</i>	write simple fractions e.g. $\frac{1}{2}$ of 6 = 3 and recognise the equivalence of $\frac{2}{4}$ and $\frac{1}{2}$ .	recognise and show, using diagrams, equivalent fractions with small denominators	recognise and show, using diagrams, families of common equivalent fractions	identify, name and write equivalent fractions of a given fraction, represented visually, including tenths and hundredths read and write decimal numbers as fractions (e.g. $0.71 = \frac{71}{100}$ )	use common factors to simplify fractions; use common multiples to express fractions in the same denomination  associate a fraction with division and calculate decimal fraction equivalents (e.g. 0.375) for a simple fraction (e.g. $\frac{3}{8}$ )
		<i>recognise and write decimal equivalents of any number of tenths</i>	recognise and write decimal equivalents of any number of tenths or hundredths  recognise and write decimal equivalents to $\frac{1}{4}$ ; $\frac{1}{2}$ ; $\frac{3}{4}$	recognise and use thousandths and relate them to tenths, hundredths and decimal equivalents  recognise the per cent symbol (%) and understand that per cent relates to “number of parts per hundred”, and write percentages as a fraction with denominator 100 as a decimal fraction	<i>Find simple percentages of amounts</i> recall and use equivalences between simple fractions, decimals and percentages, including in different contexts.

**ADDITION AND SUBTRACTION OF FRACTIONS**

Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
		add and subtract fractions with the same denominator within one whole <i>using diagrams</i> (e.g. $\frac{5}{7} + \frac{1}{7} = \frac{6}{7}$ )	add and subtract fractions with the same denominator <i>using diagrams</i>	add and subtract fractions with the same denominator and multiples of the same number <i>using diagrams</i>  recognise mixed numbers and improper fractions and convert from one form to the other and write mathematical statements > 1 as a mixed number (e.g. $\frac{2}{5} + \frac{4}{5} = \frac{6}{5} = 1\frac{1}{5}$ )	add and subtract fractions with different denominators and mixed numbers, using the concept of equivalent fractions

**MULTIPLICATION AND DIVISION OF FRACTIONS**

				multiply proper fractions and mixed numbers by whole	multiply simple pairs of proper fractions, writing the answer in its simplest form <i>using diagrams</i> (e.g. $\frac{1}{4}$ )
--	--	--	--	--	--

				numbers, supported by materials and diagrams	$\times \frac{1}{2} = \frac{1}{8}$ )
					multiply one-digit numbers with up to two decimal places by whole numbers
					divide proper fractions by whole numbers (e.g. $\frac{1}{3} \div 2 = \frac{1}{6}$ )

**MULTIPLICATION AND DIVISION OF DECIMALS**

Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
			find the effect of dividing a one- or two-digit number by 10 and 100, identifying the value of the digits in the answer as ones, tenths and hundredths	<i>Continue to find the effect of dividing a one- or two-digit number by 10 and 100, identifying the value of the digits in the answer as ones, tenths and hundredths</i>	multiply one-digit numbers with up to two decimal places by whole numbers multiply and divide numbers by 10, 100 and 1000 where the answers are up to three decimal places identify the value of each digit to three decimal places and multiply and divide numbers by 10, 100 and 1000 where the answers are up to three decimal places associate a fraction with division and calculate decimal fraction equivalents (e.g. 0.375) for a simple fraction (e.g. $\frac{3}{8}$ ) use written division methods in cases where the answer has up to two decimal places
