

Sycamores in Space

This term the Sycamores will be looking up to the sky in science. Studying the sun, moon and other planets in our solar system. It will be the influence for our literacy, starting with news-paper reports recording the success of mans' achievements in space exploration. We will then move on to science fiction, reading the book 'Phoenix' by the author S.F. Said. Who knows where our imaginations will take us?

As well as space we will be digging up the past as far back as 9000 years. Discovering how Britain changed through the Stone Age - Bronze Age and Iron Age. We will become historians investigating evidence that has been left behind to build a picture of life during this time period.

Maths, as always, will be problem solving using this to build our skills in multiplication, division and then moving on to fractions later in the term.
