

Sycamores Class (Year 4 and Year 5)

Dover-tastic

During the next term the super Sycamores will be exploring the geography of Dover. What is it about Dover that makes Dover so special? Using maps to find our way and to make our own map of our local area. In maths we will be focusing on fractions. We will find out what types of fractions there are, finding fractions of shapes/numbers and working out why fractions can be the same.

Within our English we will be finishing our class book 'The Demon Dentist' by David Walliams and using this to write our own stories. As extra inspiration we will be going to watch the stage production of the story at the Marlowe.

During science we will be investigation forces, such as gravity, friction and resistance. Then we will explore how these are used in engineering.
